

Elmaddin Bayramov

Frontend Developer

(React / Javascript / PHP/ SQL / Next.js / Redux / jQuery / Bootstrap)

I'm Elmaddin, a front-end developer with a knack for turning ideas into interactive, user-friendly web apps. My go-to tools are React, JavaScript, and Next.js, but I love solving backend puzzles with Node.js, PHP, and MySQL. Whether I'm debugging or building full-stack solutions, I'm always up for a challenge. With experience deploying projects to AWS and DigitalOcean, I'm eager to join a team where I can sharpen my front-end skills and dive deeper into backend development. Let's make something awesome together!

Relevant Experience

Junior Frontend Developer, MigrationPro

Dec 2023 - Present

- Created polished applications using React, delivering a fully functional frontend, integrated seamlessly with backend services.
- Integrated various APIs to enhance the applications' functionality and provide users with up-to-date information.
- Created a library of front-end components using CSS, React, and state management using Redux-Toolkit.
- Utilized Git for version control and collaborated with team members using Git branches and pull requests.

Projects

Duck Strikes Game — Javascript/React/Styled-Components

"Duck Strikes" is a React game featuring duck protagonist fighting skeleton enemies. Players can create custom maps, adding enemies and obstacles, and control the duck's movements using arrow keys and space bar.

Live project: <https://ebayramov.github.io/duck-strikes-react-game/>

TtB Youth Association — Javascript/PHP/MySQL/Bootstrap/CSS

Designed and developed a user-friendly website for TtB Youth Association, empowering young people with accessible information and engagement opportunities. Key features include program showcases, news subscription, contact forms, project search, membership applications, and online donations via Stripe.

Live project: <https://ttbplus.eu>

Real Time Chat Application — Next.js/PHP/Socket.io/Docker/MySQL

Developed a real-time chat application, enabling users to connect and communicate seamlessly. Features include user profiles, public and private chat rooms with password protection, text and image messaging, and room invitations.

Github Repo: <https://github.com/ebayramov/my-chat-app>
